

Overview:

In this Project, students become artists. Using the program PhotoFilter, they apply digital editing and paint tools to produce masterpieces. Sample artwork from pop artists such as Andy Warhol, Robert Indiana, and Jasper Johns are used to spark the imagination. Once inspired, students transform their digital photographs into posters, skill screens, and billboards. The fun continues when their name is turned into a pop art sensation. These works of art are worthy of any museum!

Covered Objectives:

- ☞ Obtain a digital photo.
- ☞ What is pop art?
- ☞ Recognize distinguishing characteristics of the pop art style.
- ☞ Create a duplicate of the image.
- ☞ Create a folder.
- ☞ Open and close PhotoFiltre program.
- ☞ Maximize a window.
- ☞ Save an image to a folder
- ☞ Adjust the color within the photo by using various program options including: swap RGB channel, replace color, replace color range, duotone, dithering, negative, and posterize
- ☞ Crop a picture
- ☞ Place the portraits onto a contact sheet.
- ☞ Create a pop art poster.
- ☞ Silk Screen and pop art.
- ☞ Explore the features of the following tools: Fill, Spray, Paintbrush, Blur , Smudge and Clone Stamp.
